DETAILED ACTION

1. Upon review of Applicant's amendments to the claims filed March 13, 2006, it is noted that a restriction/election is warranted. Any inconvenience to Applicant is regretted.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to an apparatus, classified in class 345, subclass 582.
- II. Claims 16-17, drawn to a mobile communication device, classified in class 455, subclass 566.
- III. Claims 18-31, drawn to a method, classified in class 382, subclass 276.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions III and I/II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another and

Art Unit: 3663

materially different apparatus such as a calculator for drawing graphs of a square, a rectangular, a circle, or a triangle. In addition, the apparatus as claimed can be used to practice another and materially different process a method for determining the overlapping portion of two superimposed objects such as a triangle overlaps a rectangle.

4. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a mobile communication device can render a triangle by mapping the triangle from the memory without determine whether the pixels fall within the triangle area. The subcombination has separate utility such as drawing graphs of a square, a rectangular, a circle, or a triangle on a calculator.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject, restriction for examination purposes as indicated is proper.

Art Unit: 3663

6. Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 C.F.R. 1.143).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to LUU MATTHEW whose telephone number is (571) 272-7663. The examiner can normally be reached on Flexible Schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JACK KEITH can be reached on (571) 272-7663. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
